

IDENTITY 1.0

Intelligence, with intention.

The complete Kairos brand and interface system.

The word "KAIROS" is rendered in a bold, dark blue, sans-serif typeface. The letters "KA" are enclosed within a light purple rounded square, which serves as a visual anchor for the brand identity.

A distinct AI module. A composed trading workspace.

Built from selected concept 09. Lavender anchors the identity; Things-inspired surfaces give information room to breathe. Neo Sans Pro and Operator Mono preserve the project's typographic character.

[Logo system](#)[Color & type](#)[Interface rules](#)[Production handoff](#)

01 / FOUNDATION

Decisive in form. Transparent in voice.

The brand should make complex decisions easier to inspect.

Precise

Use specific actions, measured language and consistent units. Let the evidence lead.

Composed

Calm surfaces and intentional contrast give market information a clear hierarchy.

Accountable

Separate the model assessment, execution rules and actual outcome in the interface.

Naming

Use KAIROS in the logo. Use Kairos in prose, titles and product copy. The AI capsule remains part of the mark; avoid alternate capitalization in formal assets.

Positioning

Kairos is an experimental model-assisted crypto trading workspace. Present it as software for assessing opportunities, with transparent uncertainty and code-enforced limits.

Brand line

Intelligence, with intention.

02 / PRIMARY LOGO

One signature. Four essential treatments.

The selected #09 geometry is preserved; only framing and approved colors change.

Use the full-color wordmark by default. Monochrome artwork uses a real transparent knockout for AI, so it remains a single-ink mark on any suitable background.

03 / CONSTRUCTION

Give the mark room to work.

Protect the shape, the AI capsule and the surrounding clear space.

Keep

Original proportions, path geometry, capsule radius and the relationship between the letters.

Avoid

Recoloring AI alone, adding shadows, stretching, outlines, extra symbols or a second AI capsule.

Digital minimums

Primary wordmark: 120 px wide.
Preferred header size: 160-200 px.
Standard KAI artwork: 48 px wide. Below that, use the simplified favicon.

Print minimums

Wordmark: 30 mm wide. Standard KAI: 12 mm wide. Use vector masters.
Minimum sizes are starting rules; verify at final production size.

Placement

Primary is wordmark-only. In the optional icon/title lockup, the KAI icon appears only to the left.

04 / ICON SYSTEM

KAI, at every scale.

Only the KAI portion of the chosen wordmark becomes an icon.

Standard / dark

Standard / light

Simplified / small

One-ink knockout

Favicon

Simplified 16, 32 and 48 px PNGs; SVG; multi-size ICO. A fixed dark tile is the universal default. Explicit light and dark variants are included.

App / launcher

1024, 512, 256, 192, 180, 128 and 64 px app exports. Full-bleed square artwork lets platforms apply their own masks. Use the 180 px Apple touch icon.

Maskable artwork keeps KAI inside the central safe circle (80% diameter). Use the dedicated maskable files in a web manifest. Keep the primary wordmark separate from launcher icons.

05 / SIGNATURE COLOR

Lavender is the constant.

The capsule stays #C1A0FF in both light and dark mode.

Lilac

#C1A0FF

Primary brand / AI capsule

Ink

#161022

AI lettering / app tile

Cloud

#E5EEF9

Primary wordmark on dark

Interface actions need their own contrast.

Use deep violet #6B43B5 for light-mode actions and lilac #C1A0FF for dark-mode actions. The brand capsule itself is unchanged.

06 / SURFACE SYSTEM

Two modes. One hierarchy.

Use semantic tokens instead of hard-coded theme colors.

ROLE / CSS TOKEN		DARK	LIGHT
Canvas	--bg	#181C20	#F6F7F8
Surface	--surface	#1C2127	#FFFFFF
Raised surface	--surface-raised	#282C34	#F6F7F8
Decorative divider	--border	#35393E	#EBEDF0
Control boundary	--control-border	#707986	#7B8088
Primary text	--text	#DADADA	#222222
Secondary text	--muted	#BABABA	#5A5A5A
Action / link	--accent	#C1A0FF	#6B43B5
Action hover	--accent-hover	#D2BAFF	#583399
Text on action	--on-accent	#161022	#FFFFFF
Selected surface	--accent-soft	#282C34	#EFE7FF
Focus ring	--focus	#C1A0FF	#6B43B5

Low-contrast divider tokens are decorative. Form boundaries use control-border.

07 / SEMANTIC COLORS

Color should explain a state.

Keep brand violet distinct from gain, loss, warning and information.

Positive Filled successfully, available, positive return.	DARK #44CF6E LIGHT #187D3D
Negative Failed action, destructive control, negative return.	DARK #FF7378 LIGHT #C83043
Caution Review required, stale data, a pending state.	DARK #E0DE71 LIGHT #8B641F
Information Context, a neutral notice, process status.	DARK #7EB6FF LIGHT #086DDD

Pair every state color with text, a sign, or a meaningful icon. Never rely on red/green alone.

08 / TRADING ACCENTS

Violet, green or red. Always Kairos.

Six interface combinations: three accent variants, each with light and dark mode.

KAIROS / Interface accents

Three expressions. Consistent trading semantics. Light mode.

Violet

#6B43B5

Primary action

Selected navigation

BTC / USD

\$67,482.20

+2.84% / gain

-1.21% / loss

Actions / selection / focus

Status colors stay semantic.

Green

#187D3D

Primary action

Selected navigation

BTC / USD

\$67,482.20

+2.84% / gain

-1.21% / loss

Actions / selection / focus

Status colors stay semantic.

Red

#C83043

Primary action

Selected navigation

BTC / USD

\$67,482.20

+2.84% / gain

-1.21% / loss

Actions / selection / focus

Status colors stay semantic.

Logo lavender remains #C1A0FF in every interface accent theme.

Choose accents in Settings. The theme and accent preferences persist independently.

Signature

Violet is the default. Green and red are optional interface accents for actions, focus rings and selected states.

Trading semantics

Gain stays green. Loss stays red. Every value also carries a sign or a label, independent of the accent preference.

Set data-accent="violet", "green" or "red" together with data-theme. The primary #09 logo stays lavender. Dedicated CSS, JSON, GPL and SVG/PNG palettes are included.

09 / TYPOGRAPHY

The project’s own typographic voice.

Neo Sans Pro leads. Operator Mono Lig Nerd Font makes data easy to scan.

NEO SANS PRO

A clearer view.

The signals that matter.

Regular for body text; Medium for labels; Bold for headings.
Neo Sans Pro Ultra is reserved for the supplied logo artwork.

OPERATOR MONO LIG NERD FONT

\$67,482.20

+2.84% / 0.68

action: "hold"

Use for balances, prices, timestamps and code. Use the repo’s OperatorMonoSSmLig Nerd Font for bold monospace.

TYPE SCALE

48-64

Display

28-38

Page title

16-20

Section

14-16

Body

12-14

Data

Primary fonts resolve locally in the template. See implementation notes for licensed self-hosting.

10 / LAYOUT & MOTION

A rhythm that gives content priority.

Use a 4 px spacing unit, restrained corners and a consistent information hierarchy.

Spacing

4 px details. 8-12 px inside controls.
16-24 px inside cards. 24-32 px between groups. 48-64 px for major sections.

Shape

8 px control radius; 16 px card radius. Use rounded pills for small statuses only.
Borders separate structure; avoid heavy shadows.

Motion

120 ms hover; 180 ms state transitions.
Keep motion functional. Honor prefers-reduced-motion. Avoid animated price hype or flashing gains.

Dashboard structure: stable navigation, a clear page heading, summary metrics, analysis and assessment, then the detailed position table. Collapse into a single column as available width decreases.

11 / COMPONENTS

Familiar controls. Explicit outcomes.

The template includes reusable states in its UI library.

Primary

Secondary

Text action

Destructive

Market

BTC / USD

Workspace name

Research desk

Helpful guidance belongs beneath the field.

Feedback

Saved successfully

Review required

Unable to connect

Label inputs visibly. Pair errors with recovery guidance. Confirm consequential actions in a focused dialog. Provide an empty state and a loading state for every data region.

12 / DARK APPLICATION

Focused, without visual noise.

Dark mode uses Things charcoal surfaces and the original lavender capsule.

Hierarchy

Lavender identifies interaction. Neutral cards separate information without competing with the chart.

Data

Operator Mono supports values and timestamps. Labels and signs reinforce semantic color.

Screenshot of the included working template. Data is illustrative; controls do not connect to an exchange.

13 / LIGHT APPLICATION

The same workspace, in daylight.

Paper and mist surfaces preserve the same layout and interaction model.

Hierarchy

Deep violet creates readable links and actions on light surfaces. The logo capsule remains lavender.

Separation

Subtle dividers structure panels. Higher-contrast boundaries identify interactive form controls.

Theme preference persists locally. Settings can follow the operating system's light or dark preference.

14 / RESPONSIVE BEHAVIOR

Small screen. Same priorities.

Navigation compresses; content becomes one column; tables scroll inside their own region.

Breakpoints

At 1200 px, metrics become two columns. At 1000 px, the chart and assessment stack. At 700 px, navigation becomes a compact top row.

Content discipline

Never hide the current market, execution context or empty-state explanation. Let long tables scroll without widening the whole page.

The supplied template was checked at 360, 390, 768, 1024 and 1480 px widths in all three main views.

15 / PRODUCT VOICE

Say what happened. Say what happens next.

A transparent interface gives users enough context to judge the action.

Pattern

State + evidence + available next action

Assessment

"Hold. The sample signal does not clear the execution threshold."

Keep the action separate from model confidence and expected return.

Execution

"Order pending. Waiting for exchange confirmation."

Distinguish a request from a confirmed fill. Avoid "Done" before confirmation.

Recovery

"Connection unavailable. Last update: 09:42. Retry connection."

Make stale information visible and explain what can be done next.

Use plain language and consistent units. Prefer "model assessment" over claims of certainty. Demo, simulated and live states must be explicit. The brand line is an identity statement, not a performance promise.

16 / IMPLEMENTATION

A portable starting point.

The web template is plain HTML, CSS and JavaScript, with no build step.

Start locally

From the unpacked brand-pack folder: `python -m http.server 8000`. Open `/web-template/` in your browser. Serve the whole pack so guide and palette links resolve.

Theme API

Set `data-theme="dark"` or `"light"` and `data-accent="violet"`, `"green"` or `"red"` on `<html>`. `tokens.css` exposes semantic variables such as `--surface`, `--text` and `--accent`. Use the supplied toggle or system preference.

```
<link rel="icon" href="assets/favicon.svg">
<link rel="apple-touch-icon" href="assets/apple-touch-icon.png">
<link rel="manifest" href="manifest.webmanifest">
<link rel="stylesheet" href="tokens.css">
```

Font handoff

CSS resolves the installed Neo Sans Pro and Operator Mono fonts by their exact local names. For production, add licensed webfont files and `url()` sources to the declared `@font-face` rules. Noto fallbacks are included for portability.

17 / ACCESSIBILITY & VERIFICATION

Readable states are part of the identity.

81 palette combinations were checked using the WCAG sRGB contrast calculation.

PAIR	DARK	LIGHT
text / surface	11.59:1	15.91:1
muted / surface	8.35:1	6.9:1
accent / surface	7.51:1	6.78:1
on-accent / accent	8.61:1	6.78:1
control-border / surface	3.68:1	3.97:1

Token rules

Body, muted, action and status text: at least 4.5:1 on the defined surfaces. Control boundaries and focus: at least 3:1. Divider colors are decorative.

Interaction checks

Responsive overflow, theme persistence, keyboard tabs, Escape and focus return, form validation, search, empty states and demo activity were exercised in Chromium.

These are token and template checks, not a full assistive-technology or WCAG conformance audit.

18 / HANDOFF & SOURCES

Everything needed to carry it forward.

Use the supplied masters; keep the system consistent as the product grows.

logos/	Full-color and one-ink wordmarks; optional left icon/title lockups.
icons/	KAI icons, simplified variants, app sizes, SVG/PNG/ICO and maskable exports.
palette/	SVG/PNG swatches, CSS, GIMP GPL and JSON; contrast report.
boards/	Complete identity, icon and typography boards in both modes.
web-template/	Responsive dashboard, activity, settings and UI library; documented source.
guide/	This complete guide in light and dark editions.

Source lineage

- [Things 2.2.4 / Colin Eckert / theme source](#)
- [Kairos / remote develop branch](#)
- [TypeSafe / Jev product context](#)

Reference snapshots: Kairos daf7bce (develop); Things 9b8bef9 (main). Original logo paths from concept 09. Palette values and principles are adapted; this is a Kairos identity, not an affiliation with Things or TypeSafe.

Neo Sans Pro and Operator Mono font binaries are not redistributed. Their lettering is embedded or outlined in the deliverables. Included Noto fallback fonts retain their SIL Open Font License.
